

Q) Add some dummy Employee data (about 10 entries) based on this schema given below in MongoDB.

Write a GET API route, “/employee” such that, if the URL contains query parameters like emp_name, active etc, the API returns only those employees respectively.

For ex:

Get request to “/employee?designation=manager&active=true”, should return a list of only those employees where designation is “manager” and “active” is set as true.

Marking Scheme

[Correct Code Execution: 10, Correct Approach: 3, Code Readability: 2]
